Responses to RFP Questions – Recycled Water Feasibility Study

Project WTR-00026

1. Looking at Task 4 for the Hydraulic and System assessment, do you have a model that will be provided to the selected consultant? **Our hydraulic model will be competed in the first quarter next year and well will make it available to the relevant PMs.**
2. The RFP says provide a detailed hydraulic analysis shall be performed, but reading through everything else it sounds like we just want to verify the existing hydraulics and highlight some areas that might make sense for tie-ins, placement of added infrastructure, etc. Do you have a system map/figure with the HGLs for the system/reservoirs/etc.? **You are correct in your assessment – we do not need an extensive analysis. You are welcome to reflect that in your proposal. We do not (have a system map/figure with the HGLs for the system/reservoirs/etc.) at this time, although, if this is determined to be required by the selected consultant, we may be able to ensure it is within the scope of the hydraulic modeling work that is currently underway.**
3. The RFP also states that you guys want three hard copies. Just confirming this required, and not a hold over from another RFP. **Yes, the 3 hard copies are still a requirement.**
